[21]:
```
url_2 = "https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stoc
```

[22]:
```
html_data_2 = requests.get(url_2).text
```

Parse the html data using `beautiful_soup` using parser i.e `html5lib` or `html.parser`.

[23]:
```
soup_2 = BeautifulSoup(html_data_2, 'html.parser')
```

Using `BeautifulSoup` or the `read_html` function extract the table with `GameStop Revenue` and store it into a dataframe named `gme_revenue`. The dataframe should have columns `Date` and `Revenue`. Make sure the comma and dollar sign is removed from the `Revenue` column.

> **Note: Use the method similar to what you did in question 2.**

▶ Click here if you need help locating the table

•[24]:
```
gme_revenue = pd.DataFrame(columns=["Date", "Revenue"])

for row in soup_2.find("tbody").find_all('tr'):
    col = row.find_all("td")
    date = col[0].text
    revenue = col[1].text

    # Finally we append the data of each row to the table
    gme_revenue = pd.concat([gme_revenue,pd.DataFrame({"Date":[date], "Revenue":[revenue]})], ignore_index=True)

gme_revenue['Revenue'] = gme_revenue['Revenue'].replace('[\$,]', '', regex=True).astype(int)
```

[25]:
```
gme_revenue.dropna(inplace=True)

gme_revenue = gme_revenue[gme_revenue['Revenue'] != ""]
```

Display the last five rows of the `gme_revenue` dataframe using the `tail` function. Take a screenshot of the results.

[26]:
```
gme_revenue.tail(5)
```

[26]:

	Date	Revenue
11	2009	8806
12	2008	7094
13	2007	5319
14	2006	3092
15	2005	1843
